

SEQUOIA HADASSAH

IS PROUD TO PRESENT

DR. ARIEL REVEL

HEAD OF OVUM DONATION AND FERTILITY PRESERVATION AT EIN-KEREM

A Moment to Takeoff: Preventing Medical Malpractice

April 17th at 7:30 p.m.

At a private home

Address available upon RSVP

Donation to Hadassah \$25

Presented in Hebrew.

“A Moment to Takeoff” tells the story of a senior resident on night duty in the delivery room. She is very proud of her innovation that could save babies during childbirth. The problem is that this procedure is still experimental and her ill-timed use results in a bad outcome.

The discussion after the film will focus on patient safety or as it is better known, medical malpractice.

The goal is to raise funding to start a program, similar to one at Stanford University Hospital, which would deal with physician wellness and ways to ease the workload on young medical residents. Most medical residents, particularly in obstetrics, are female and face many difficulties in balancing family life and professional life.

Professor Ariel Revel, M.D. is head of the Ovum Donation and Fertility Preservation Program and a professor at Hadassah Medical Center. He is currently a visiting professor at Stanford Medical Center. His interest in film has led him to enroll as a Cinema student at the Hebrew university. He has initiated two short films; the first ‘A Moment to Takeoff’ (2010) for which he co-wrote the screenplay and the second ‘Hidden Genes’(2015) which he wrote and directed.

Presentation in English to be held May 29th at a private home.
