A VISION FOR THE FUTURE: NEW HOPE FOR MACULAR DEGENERATION

Featuring Dr. Daniel Palanker
Professor, Department of Ophthalmology and Director of The Hansen Experimental Physics Laboratory at Stanford University, Stanford

October 6, 2020 10:30am-12:00pm

Did you know that Research is being conducted now on a retinal prosthesis to replace central vision? Dr. Daniel Palanker and his team of international scientists and physicians are on the cusp of a breakthrough in providing vision to those struggling with Macular Degeneration through the use of a retinal prosthesis (a microchip which is implanted behind the retina). Human trials are currently underway and the progress is astounding.

Join us virtually on Zoom for an informative presentation featuring Hadassah trained scientist Dr. Daniel Palanker as he shares his current research on Macular Degeneration.
